

Product Canonical Description

DittoCare Product Description

Version: December 2025 | **Status:** Living Document

1. Problem Statement

Who Experiences This Problem

- **Elderly patients with care needs** – comprehension difficulties, often attend appointments alone, struggle to relay information to family
- **Caring family members (mantelzorgers)** – 5 million in the Netherlands, receive fragmented second-hand information about loved ones' health
- **Patients with serious illnesses** – cancer, complex conditions with multiple specialists, overwhelming information volume
- **Patients facing language barriers** – migrants, non-native Dutch speakers struggling with medical terminology
- **Pregnant women and their partners** – positive use case with intrinsic eagerness to share (95% share pregnancy updates, >50% with 6+ people), high information load across many appointments

Why This Problem Remains Unsolved

- **Healthcare systems designed for providers, not patients** – EHRs serve clinicians, patient portals are fragmented across institutions
- **Privacy regulations create sharing barriers** – GDPR and healthcare privacy rules make it difficult to share information with loved ones, especially when accessing care information on behalf of someone else
- **Technology gap** – transforming complex medical conversations into understandable, shareable information requires AI capabilities that only recently became possible

Jobs to Be Done

When users come to DittoCare, they're trying to:

- **Understand** – "Help me understand what the doctor just told me"
- **Remember** – "I need to recall what was discussed in my appointment"

- **Share** – "I want to keep my family informed without repeating myself"
 - **Organize** – "I need one place for all my healthcare information"
 - **Prepare** – "Help me know what to ask at my next appointment"
 - **Support** – "I want to help my loved one manage their care"
-

2. Product Scope

What DittoCare Is

DittoCare is a privacy-first mobile application that transforms medical confusion into clarity.

Mission: *"We clarify and connect care journeys for you and your loved ones. Healthcare was never meant to be lonely."*

Positioning: The "Polarsteps of healthcare" – helping patients understand, document, and share their healthcare journey.

Value proposition: Care. Clarified.

DittoCare is explicitly *not* a medical device. It's a patient support tool that doesn't provide medical advice, diagnose conditions, or replace professional care.

3. Core Features

Capture

Voice Recording

- Record medical conversations with your phone (with consent)
- Audio stored locally on your device, encrypted

Document Scanning & Upload

- Scan discharge papers, prescriptions, and medical letters using your camera
- Upload existing documents from your photo library or files
- AI extracts and simplifies the content

Medical Scribe Integrations

- Healthcare providers using AI medical scribes can share summaries directly to patients via secure QR codes
- One-click integration – scan the QR code and the summary appears in your app
- No recording needed – get the same clarity from your doctor's existing workflow

Clarify

Transcription

- Converts your recorded medical conversations into written text
- Optimized for Dutch medical terminology and accents

Summarization

- AI rewrites complex medical content at B1 Dutch reading level
- Structures information into clear sections: what was discussed, diagnoses, medications, next steps
- Explains medical terms in plain language

Translation

- Available languages: Dutch, English, Turkish, Arabic
- In development: Farsi, Polish, German

Quality Validation

- Medication names cross-checked with Dutch national pharmacy databases
- Multiple safety layers to ensure accuracy

Connect (Care Circle)

Sharing is an essential part of DittoCare because involving loved ones reinforces feeling at ease, confident, and being supported.

Sharing Functionality

- Share summaries with your support network (family, friends, caregivers)
- Choose what to share – toggle specific sections on/off, exclude sensitive information
- Add personal messages explaining why you're sharing
- Share via invite links through WhatsApp, Signal, email

Following & Followers

- Add followers to your Care Circle who can see your shared updates
- Follow people whose healthcare journey you want to support
- All follow requests require approval – you control who sees what

Privacy Controls

- Per-event sharing decisions – share only what you want
- Make individual events private at any time
- Remove followers to revoke all their access

- Followers cannot see each other (privacy protection)

Notifications

- Get notified when someone requests to follow you
 - Get notified when someone accepts your follow request
 - Get notified when someone shares a new event with you
-

4. Supporting Features

Everything in One Place

- **Healthcare timeline** – structured, simple overview of all your healthcare appointments and events
- **Add your own events** – manually create events for appointments you didn't record
- **Set organization and provider** – name the hospital, clinic, or healthcare provider for each event
- **Attach files and documents** – upload additional files to any event
- **Build your own health record** – accumulate your complete healthcare history over time

Onboarding

- **Funnel:** Install → Caretype selection → Consent → FaceID → Registration → First event
- **Registration rate:** ~35-40% of first opens complete registration
- **Video tutorials:** Onboarding materials include videos explaining how Ditto can be used
- **User stories:** Real examples of how other people benefit from Ditto
- **Care context selection:** Dynamic onboarding based on your situation (e.g., pregnancy shows different messaging)

Customer Support

We maintain a high bar on customer support because:

- Healthcare is sensitive
- Our users might be in vulnerable situations
- Being able to talk to real people builds trust

Security & Privacy

- **App protection:** Always protected using Face ID or fingerprint – your medical data requires biometric authentication

- **Works without device lock:** You can use the app even if you don't have an unlock mechanism on your phone
- **Data in transit:** Always encrypted using TLS
- **Care Circle encryption:** End-to-end encrypted sharing with your loved ones
- **Local storage:** Medical data stored on your device, not on our servers
- **EU processing:** When audio is processed by AI, it happens in EU data centers and is deleted within minutes

For detailed technical documentation, see: [Engineering Documentation](#)

5. Detailed Functional Scoping

For complete functional requirements by feature area, see:

- [Care Circle Functional Scoping](#)
 - [Care Circle Architecture](#)
 - [QR Code System Documentation](#)
 - [Medical Scribe Integration](#)
-

6. Future Direction

We focus on the interface between **clarity for patients** and **being supported by people around them**.

More Languages

- Expand app interface to more languages (German for Q1 international expansion)
- Add more summarization languages beyond current Dutch, English, Turkish, Arabic

Social Care Circle

Make Care Circle more like a social experience:

- Engagement and reactions on shared events
- Indicate *why* you're sharing something
- Add personal messages to shares
- Enable messages back from followers

Care Journey Visualization

- Better UX for displaying care journeys – this is hard on mobile but critical for understanding
- Explore innovative ways to illustrate healthcare trajectories

- Visual representation of conditions and treatments over time

Beyond Text Summaries

- **Narration:** Text-to-speech for people less comfortable with reading
- **Visual summaries:** Infographics explaining conditions or treatments
- **Images:** Visual elements illustrating healthcare trajectory or current condition

Product Ideas Backlog

For all roadmap items and feature ideas, see: [Product Idea Board \(BIGB\)](#)

7. Current Metrics (December 2025)

- ~**35,000** registered users
 - **679** monthly active users creating summaries
 - **217** weekly active users
 - **4.7** App Store rating
 - **98%** user satisfaction
 - **35-40%** share rate per summary
-
